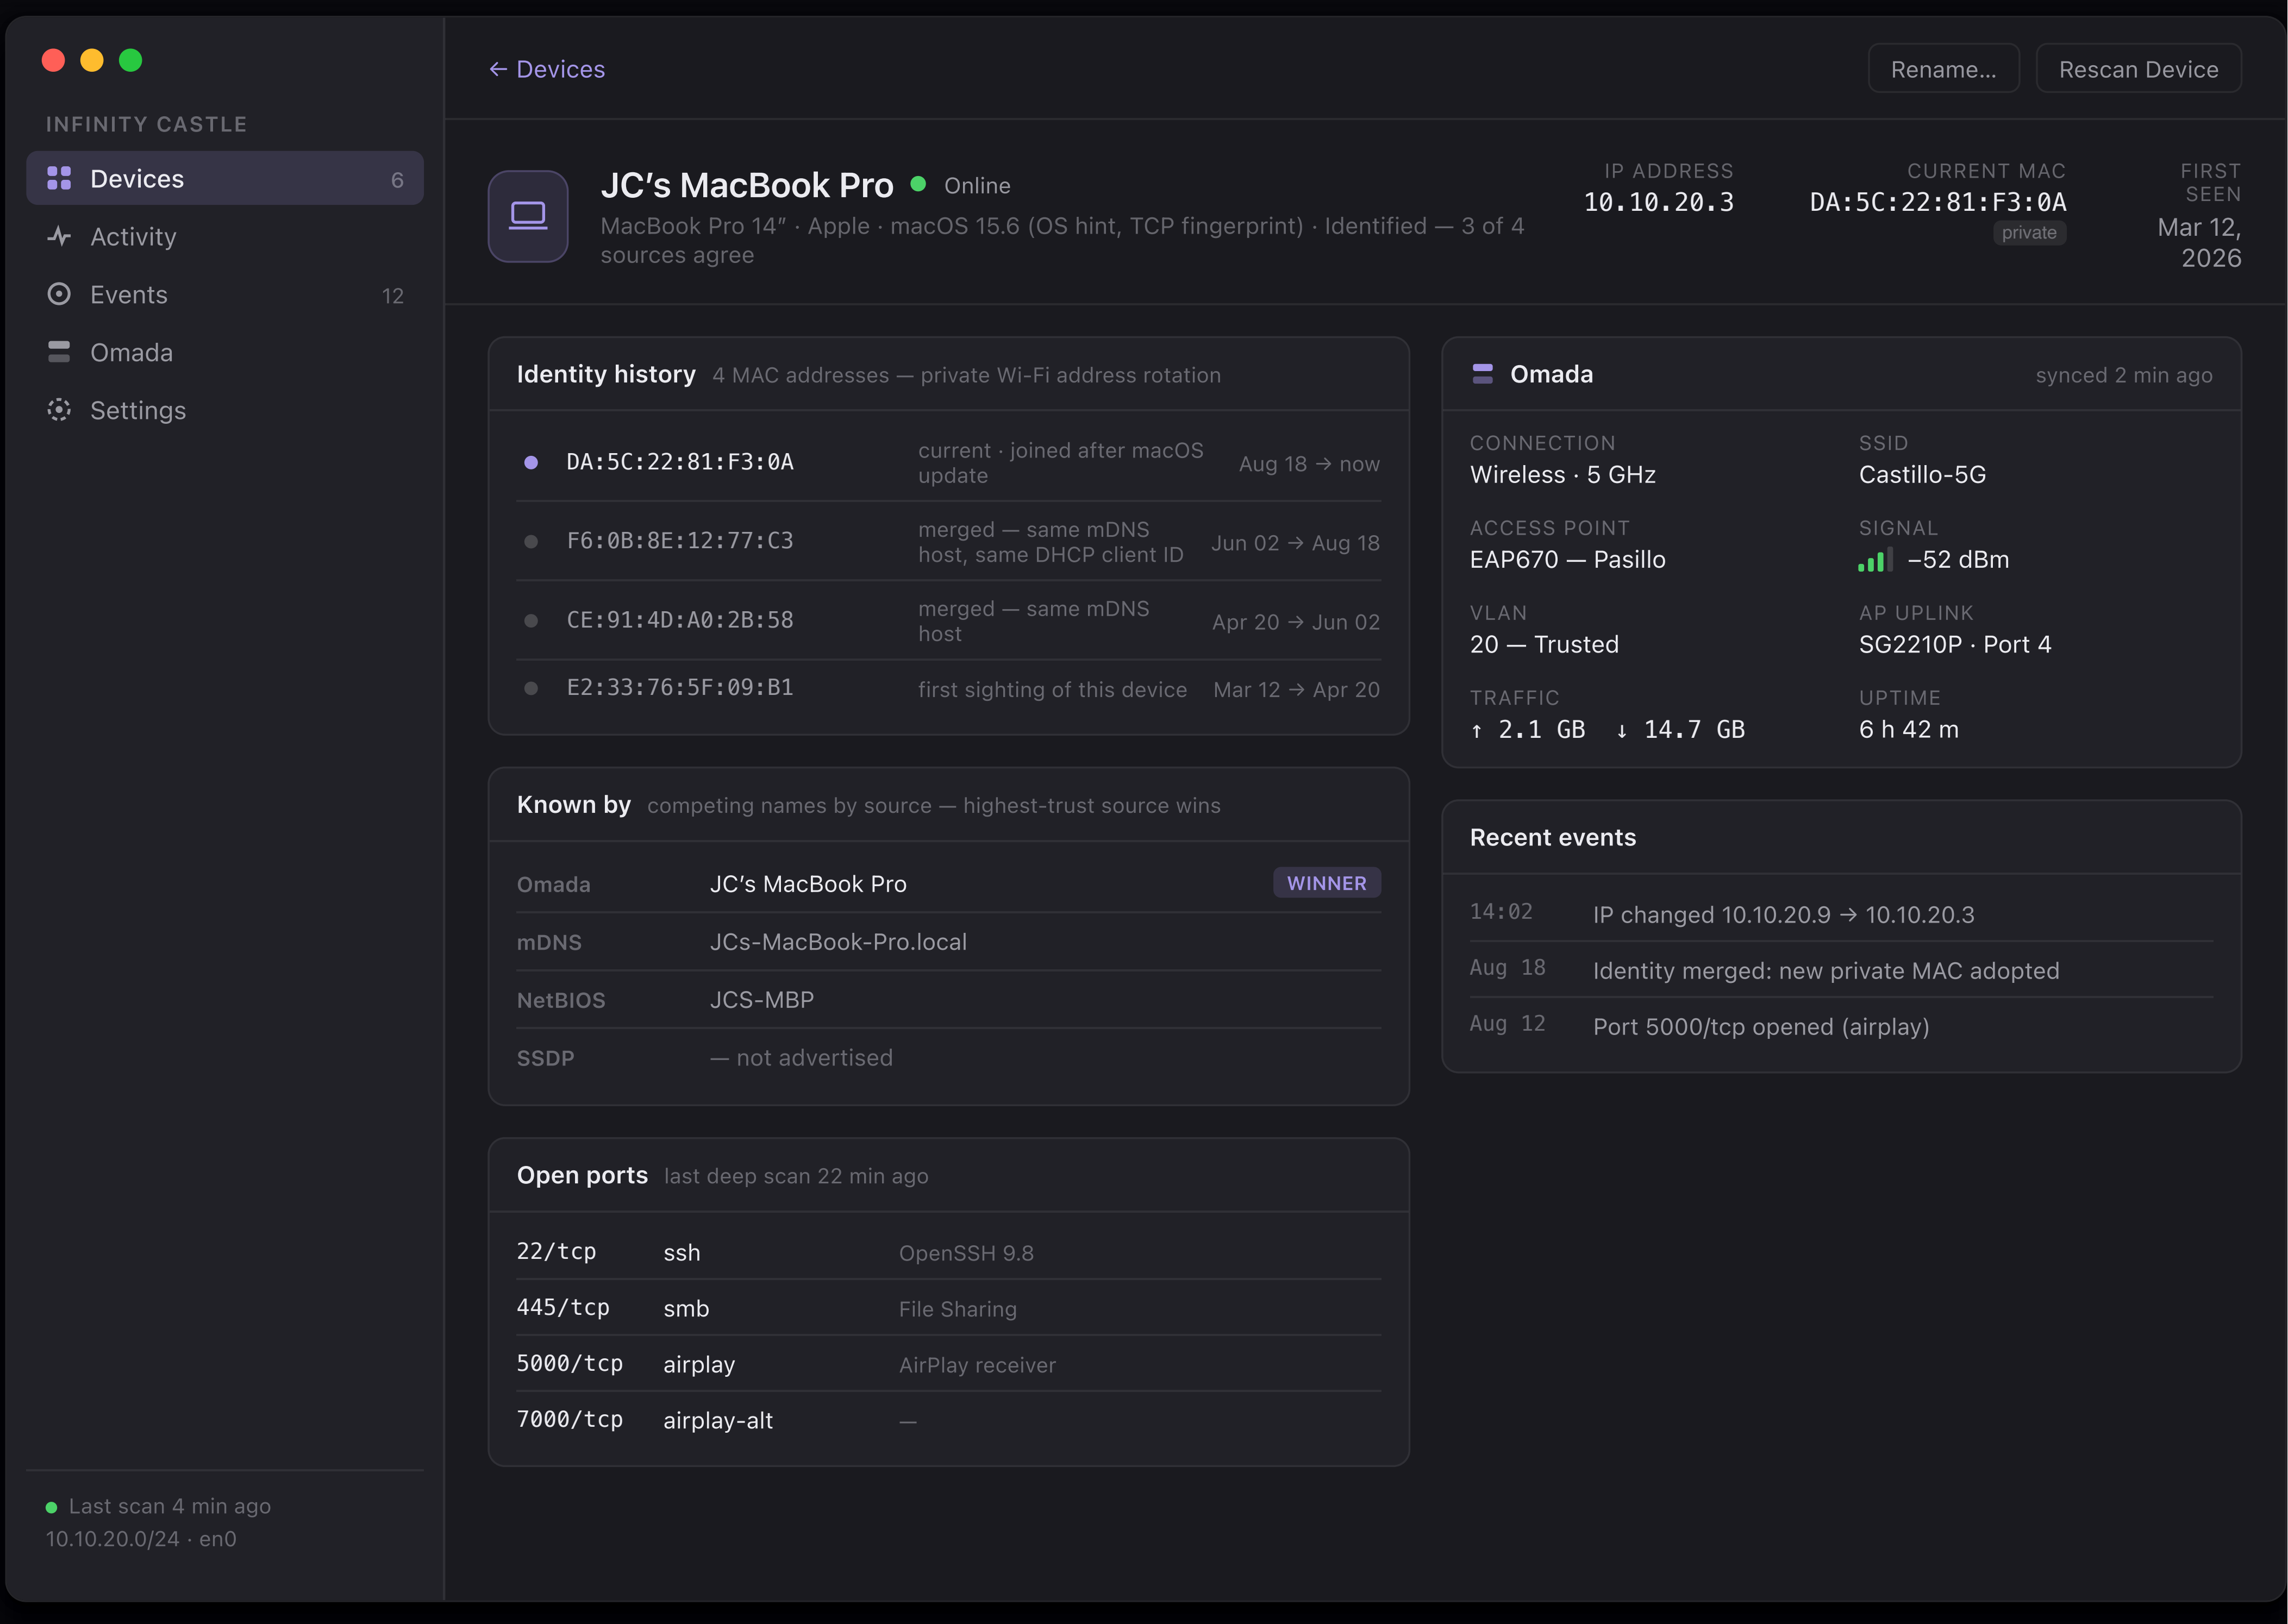
`1c` Device detail — JC's MacBook Pro: identity history, ports, Omada, "known by"



JC's MacBook Pro ● Online
MacBook Pro 14″ · Apple · macOS 15.6 (OS hint, TCP fingerprint) · Identified — 3 of 4 sources agree

IP ADDRESS: 10.10.20.3
CURRENT MAC: DA:5C:22:81:F3:0A private
FIRST SEEN: Mar 12, 2026

Identity history 4 MAC addresses — private Wi-Fi address rotation

DA:5C:22:81:F3:0A	current · joined after macOS update	Aug 18 → now
F6:0B:8E:12:77:C3	merged — same mDNS host, same DHCP client ID	Jun 02 → Aug 18
CE:91:4D:A0:2B:58	merged — same mDNS host	Apr 20 → Jun 02
E2:33:76:5F:09:B1	first sighting of this device	Mar 12 → Apr 20

Known by competing names by source — highest-trust source wins

Omada	JC's MacBook Pro	WINNER
mDNS	JCs-MacBook-Pro.local	
NetBIOS	JCS-MBP	
SSDP	— not advertised	

Open ports last deep scan 22 min ago

22/tcp	ssh	OpenSSH 9.8
445/tcp	smb	File Sharing
5000/tcp	airplay	AirPlay receiver
7000/tcp	airplay-alt	—

Omada synced 2 min ago

CONNECTION: Wireless · 5 GHz

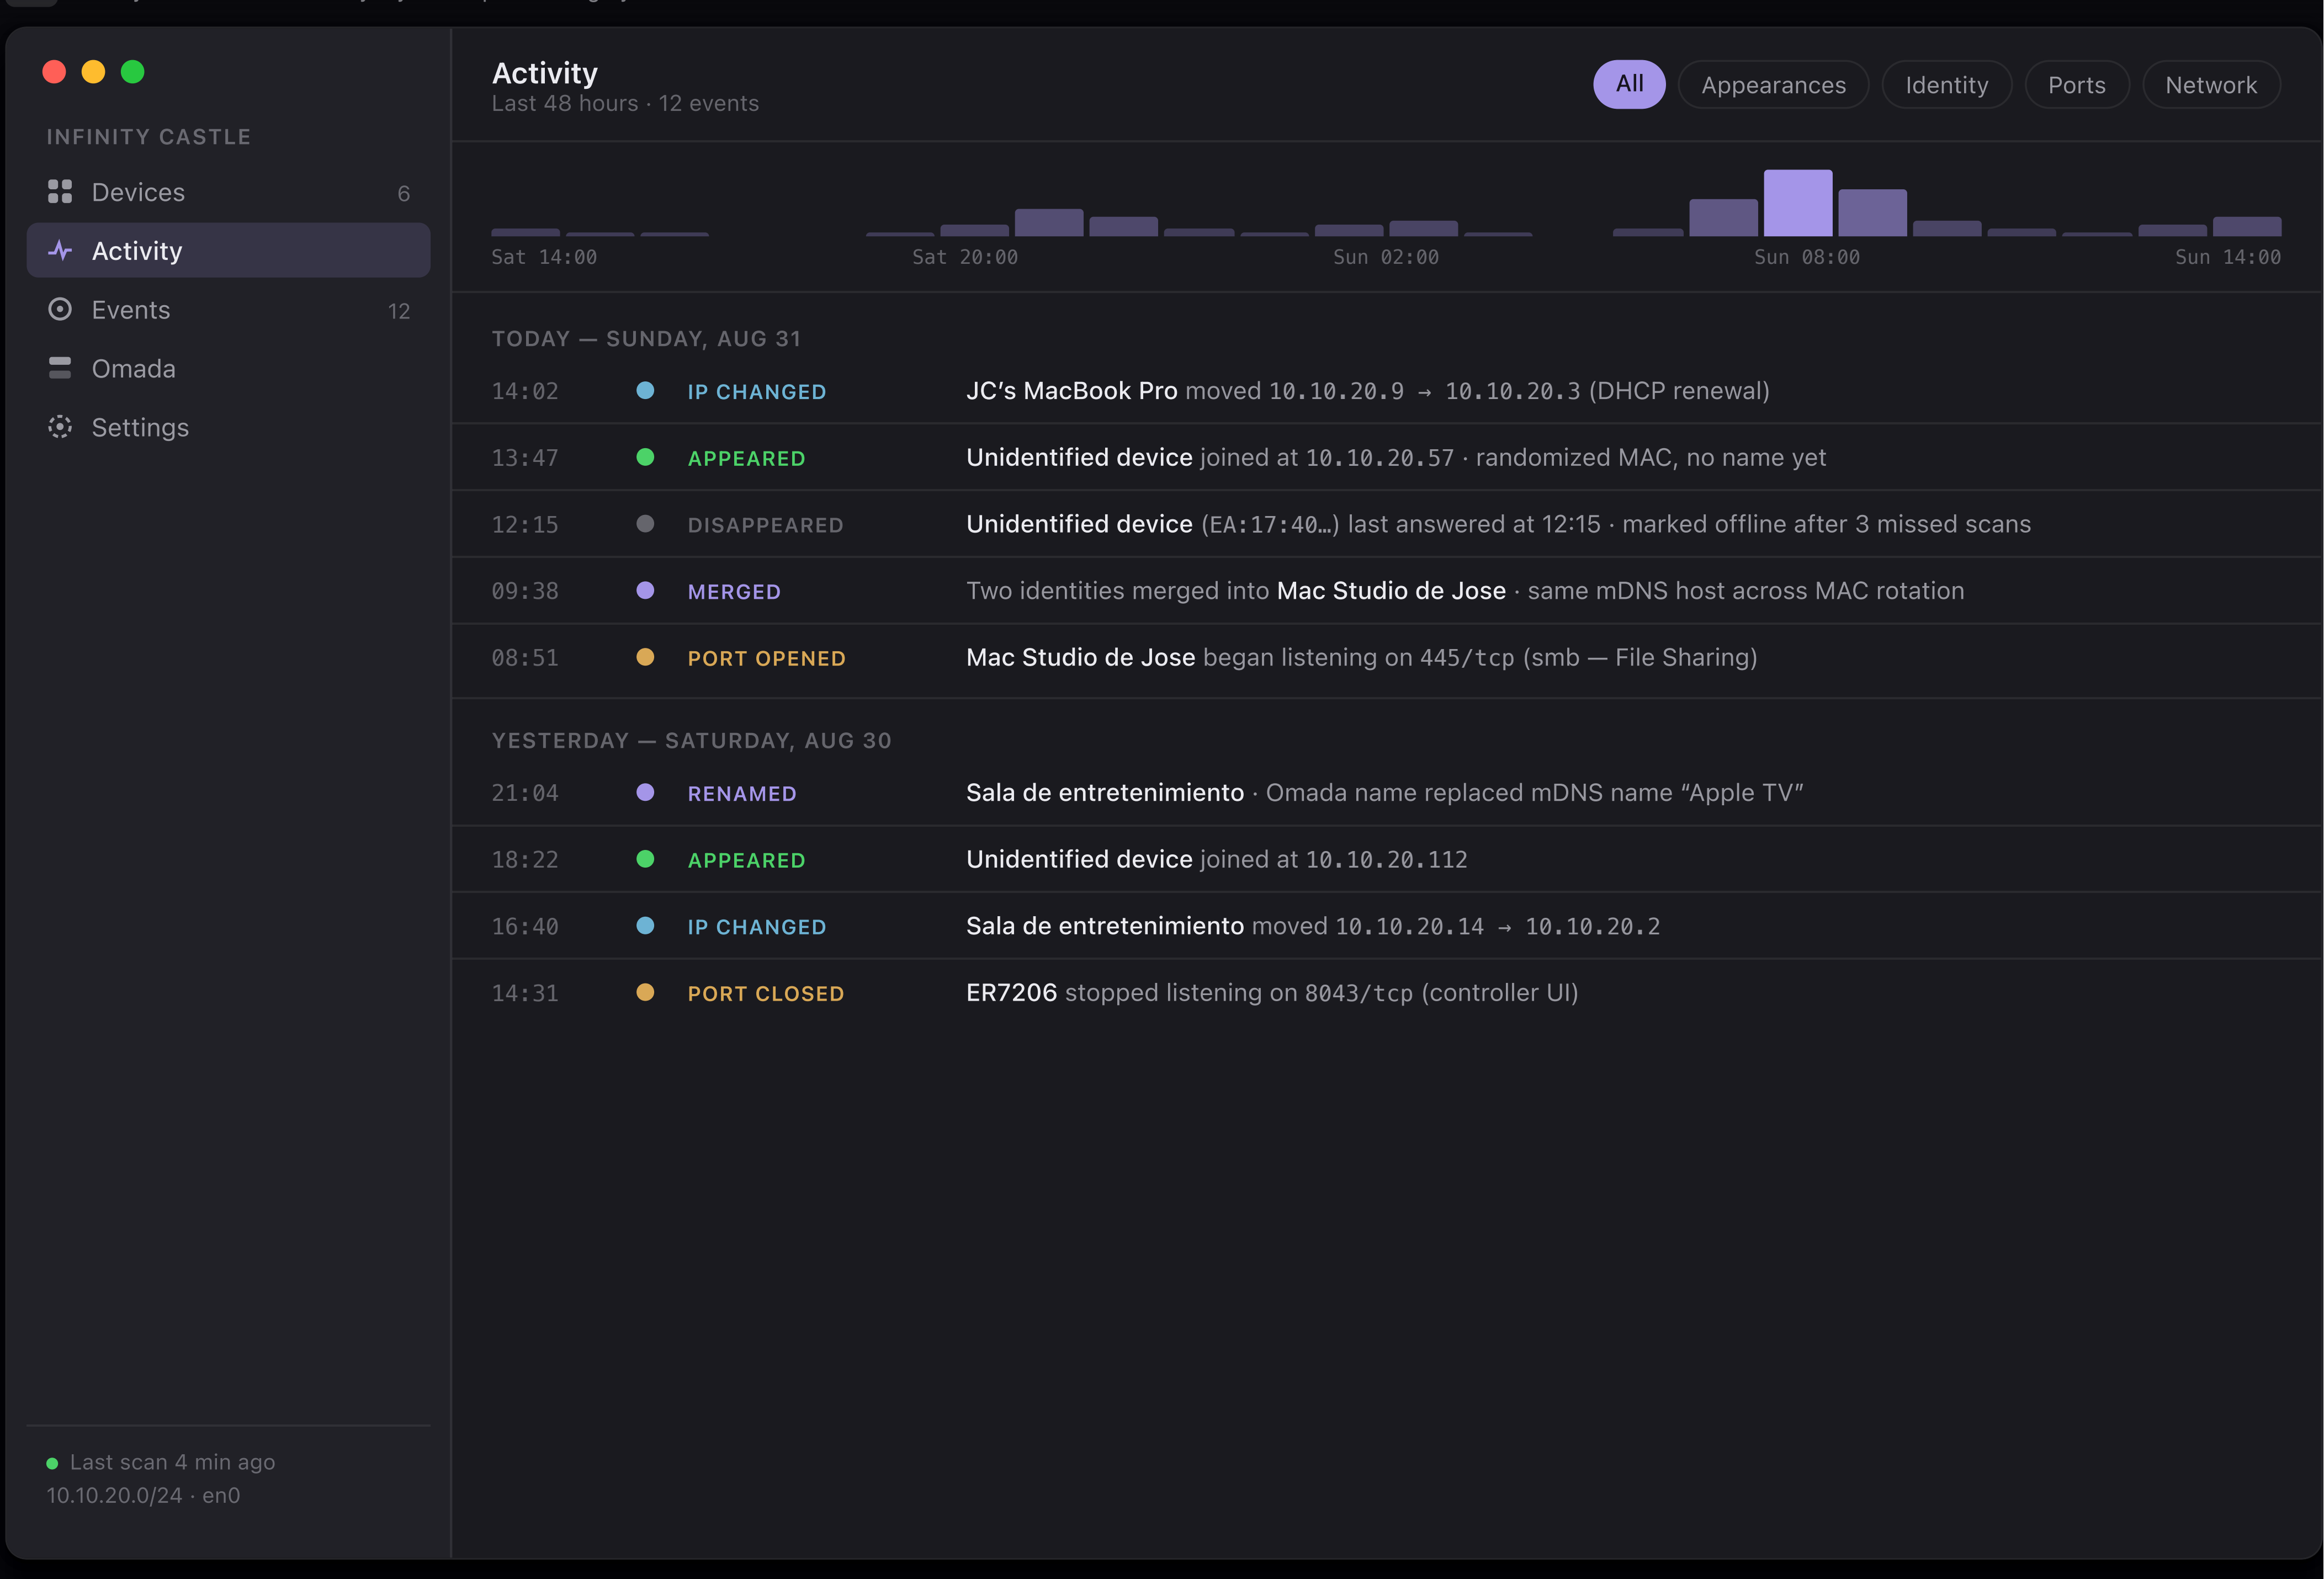
`1d` Activity — timeline with hourly rhythm strip and category filters



Activity
Last 48 hours · 12 events

TODAY — SUNDAY, AUG 31

14:02	IP CHANGED	**JC's MacBook Pro** moved 10.10.20.9 → 10.10.20.3 (DHCP renewal)
13:47	APPEARED	**Unidentified device** joined at 10.10.20.57 · randomized MAC, no name yet
12:15	DISAPPEARED	**Unidentified device** (EA:17:40…) last answered at 12:15 · marked offline after 3 missed scans
09:38	MERGED	Two identities merged into **Mac Studio de Jose** · same mDNS host across MAC rotation
08:51	PORT OPENED	**Mac Studio de Jose** began listening on 445/tcp (smb — File Sharing)

YESTERDAY — SATURDAY, AUG 30

21:04	RENAMED	**Sala de entretenimiento** · Omada name replaced mDNS name "Apple TV"
18:22	APPEARED	**Unidentified device** joined at 10.10.20.112
16:40	IP CHANGED	**Sala de entretenimiento** moved 10.10.20.14 → 10.10.20.2
14:31	PORT CLOSED	**ER7206** stopped listening on 8043/tcp (controller UI)

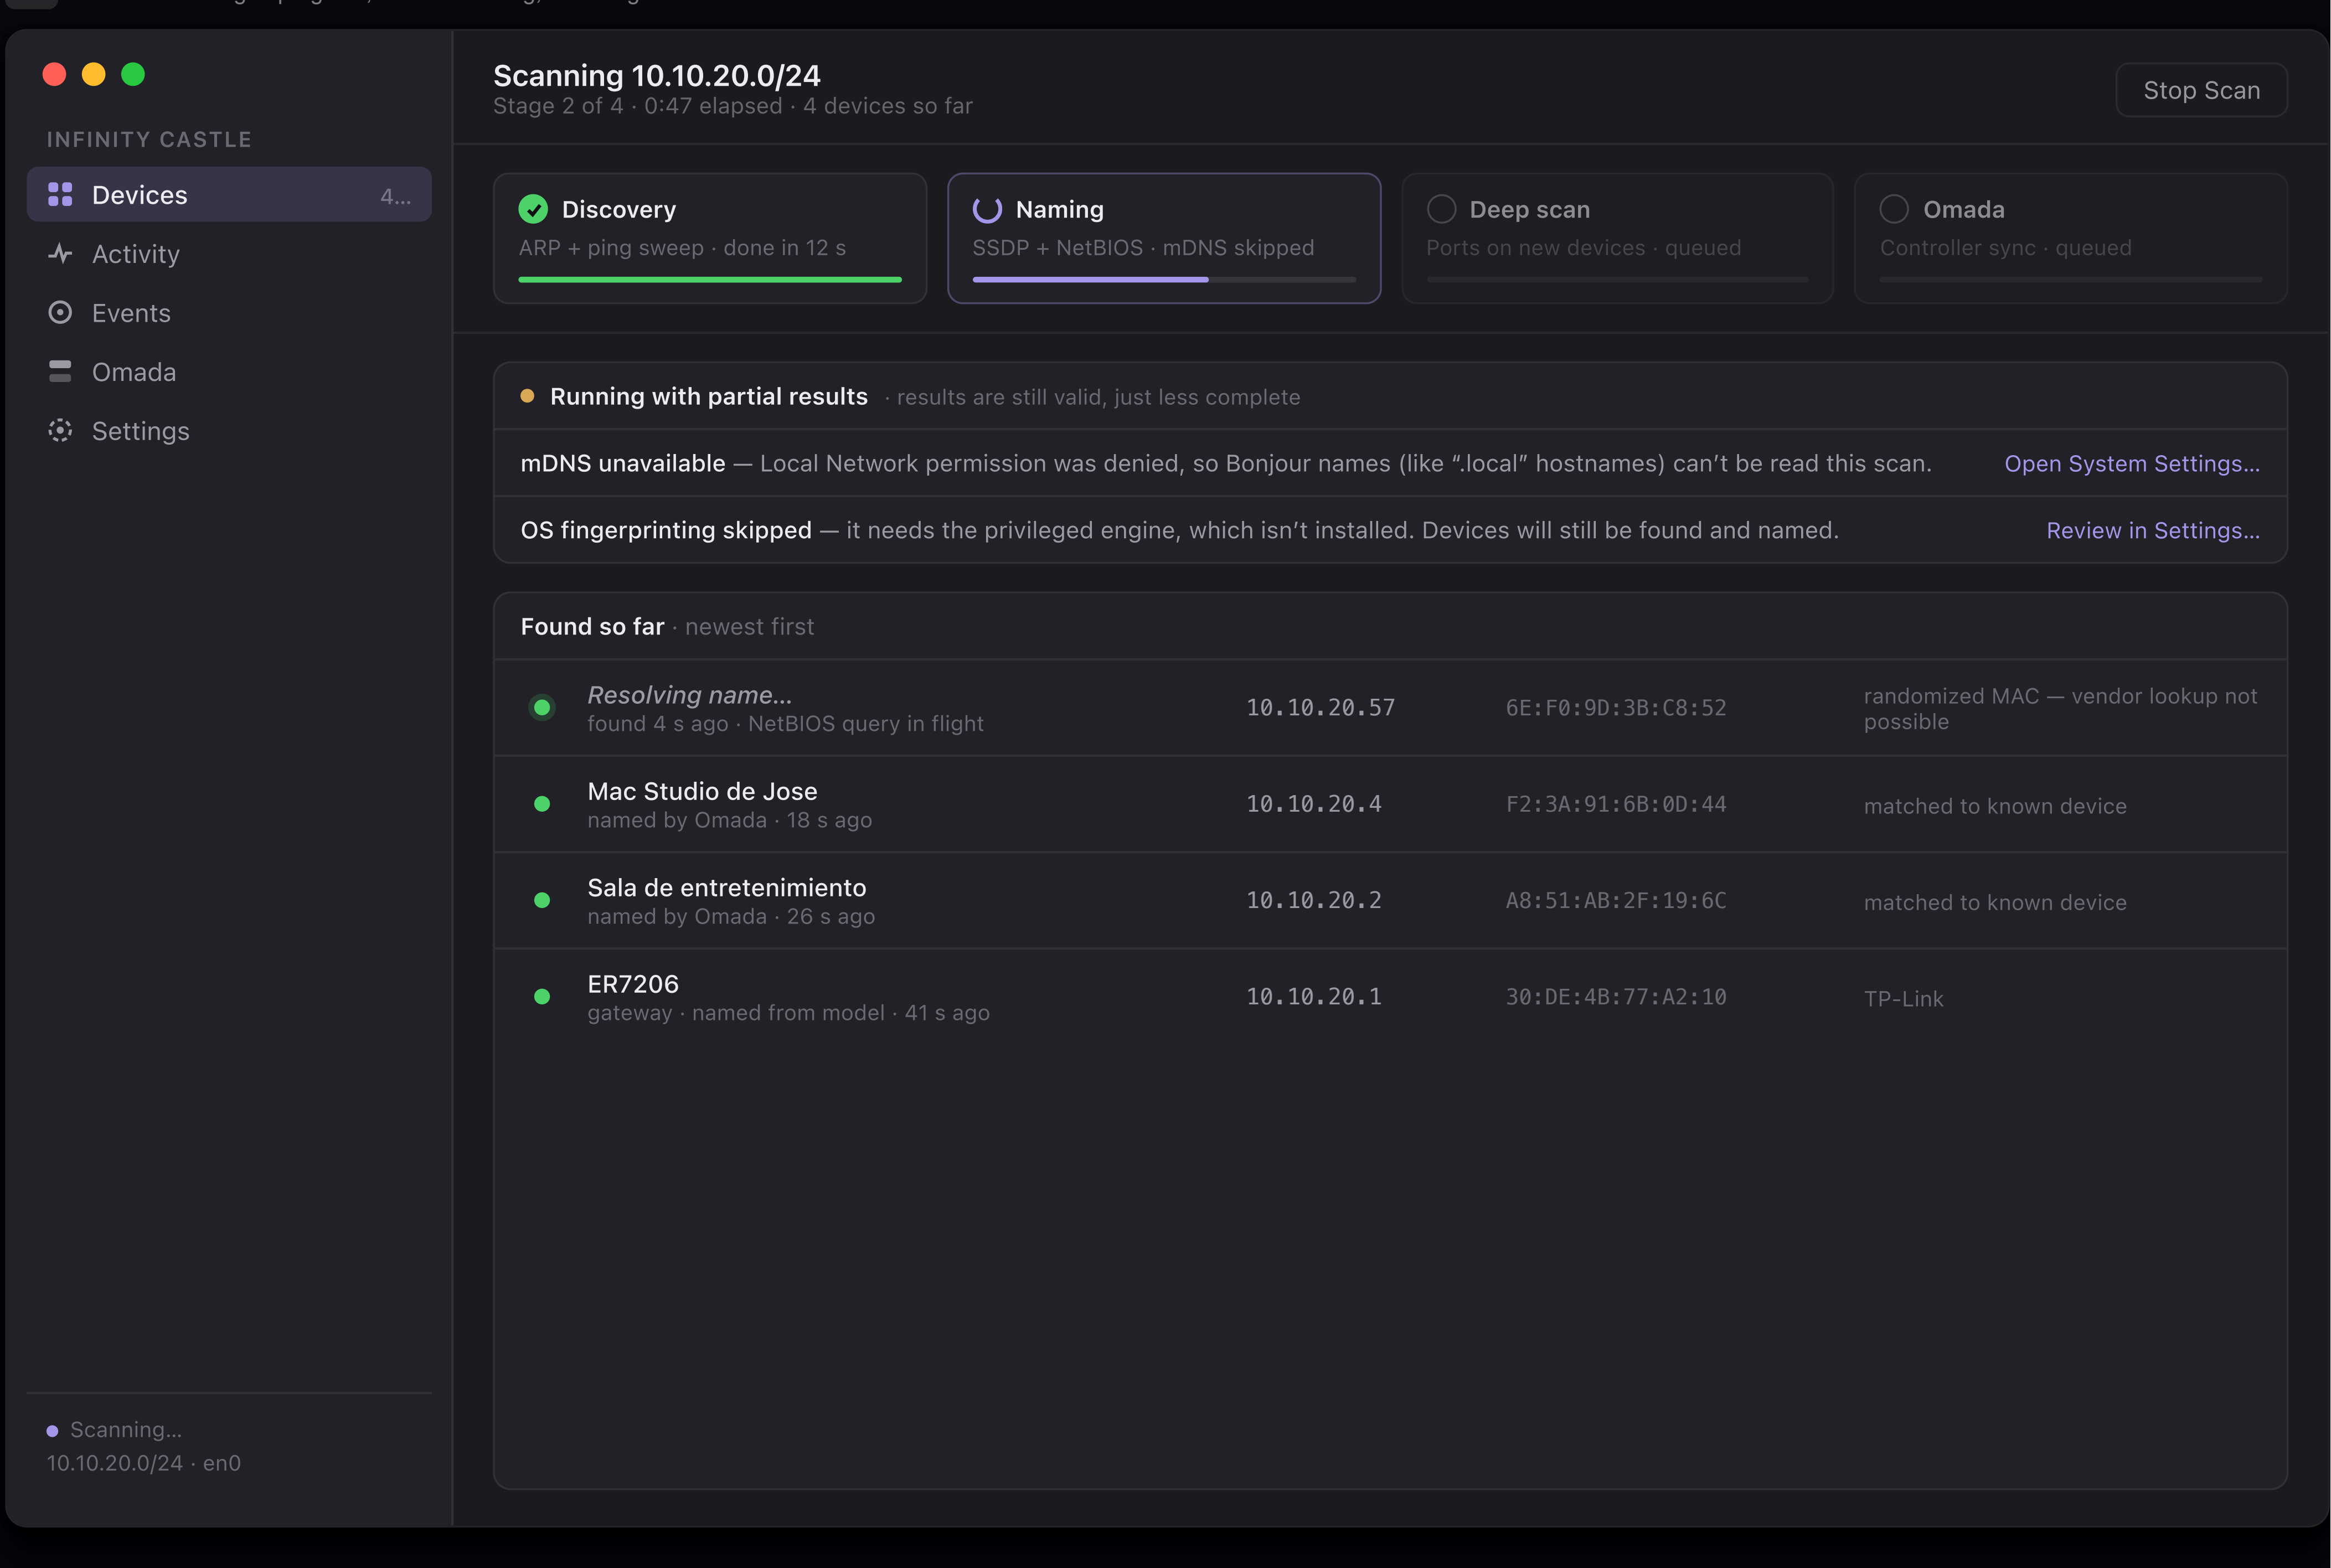
`1e` Live scan — staged progress, devices arriving, calm degradation notices



Scanning 10.10.20.0/24
Stage 2 of 4 · 0:47 elapsed · 4 devices so far

- ☑ Discovery — ARP + ping sweep · done in 12 s
- Naming — SSDP + NetBIOS · mDNS skipped
- ○ Deep scan — Ports on new devices · queued
- ○ Omada — Controller sync · queued

● **Running with partial results** · results are still valid, just less complete

mDNS unavailable — Local Network permission was denied, so Bonjour names (like ".local" hostnames) can't be read this scan. Open System Settings...

OS fingerprinting skipped — it needs the privileged engine, which isn't installed. Devices will still be found and named. Review in Settings...

SCANNING

Scan automatically: Every 15 minutes
Subnet: 10.10.20.0/24 (auto, from en0)
Deep-scan new devices — Run a port scan the first time a device is seen ●

HISTORY

Keep events for: 90 days
Device identity history: Kept forever — it's what makes merges possible

PRIVILEGED ENGINE

Use the privileged engine ○
OS fingerprinting and fast SYN port scans need raw network sockets, which macOS only grants to root. The engine is a small separate helper installed once with your admin password; it only runs during scans and only sends results back to this app. Everything else works without it.
